

Charlie Gorman

8-21-25

Homework 1

The screenshot shows the Visual Studio Code editor interface. The Explorer panel on the left shows a project named 'csce106' with a file named 'hw1.py'. The main editor window displays the code for 'hw1.py', which is a single line: `print('Hello World!')`. The bottom panel shows the TERMINAL output, which includes the command `/opt/homebrew/bin/python3 /Users/charliegorman/Desktop/csce/csce106/hw1.py` and the output `Hello World!`. The status bar at the bottom indicates the file is encoded in UTF-8, has 4 spaces, and is using the Python 3.13.7 64-bit interpreter.

Installed 3.13 using brew on MacOS.
