

Lab 3 - Task List

The purpose of this lab is to learn to use Lists in Python

Assignment:

Write a Python program to allow a user to create and manage a task list.

Recommended steps:

1. Start with an empty list
2. Prompt the user for a task (string), add it to the list
3. At any time, allow the user to:
4. Add a new task (append)
5. Mark a task as done (remove)
6. Display the list contents
7. Loop until the user quits

Submit your .py file to Blackboard

After you have completed the assignment, you may use ChatGPT to solve it again. This may give you a different perspective or an alternate solution to the problem. The code generated by ChatGPT is not your code. You are not permitted to submit it as if it were your own. It may be used for learning, reference, and troubleshooting only.
